Using the Report Card

To access information on Idaho's K-12 Report Card, go to the **School Years** tab in the upper left and click the drop down tab to select the year.
To select a district, click the diamond to the left of the **district** to see district-level data, plus a list of all schools in that district.
Click the diamond next to the **school** to find school-level data under each tab.

Most assessment and accountability data is reported by district, school or state aggregate totals. Many reports also will be reported in separate or disaggregated categories including:

- Content area tested (e.g. math, science, etc.)
- Grade level tested
- Demographic groups (e.g. Hispanic, Asian, etc.)
- Program groups (e.g. Special Education, English Learner, etc.)

Protecting Student Privacy

Cells showing a set of dots (…) are masked or redacted to comply with laws that require the State Department of Education to protect the identity of students by not publishing data that would allow the public to identify a specific student's performance. To learn more about the redaction rules used in these documents go to <u>Redaction Rules</u>.

2013-14 ISAT Data Missing

The 2013-14 assessment data is missing because the state was in the process of transitioning to a new statewide assessment and that year was a field test to find problems with the test and validate its ability to measure the adopted state standards. No student-level data was reported that year. It also means that trying to compare the 2014-15 (or later) data with any previous year's assessment data is comparing apples with oranges because they are completely different tests.
